

Preparation of riboflavin of the B/C modification in granule form

Abstract

- 5 The present invention relates to an improved process for preparing pure riboflavin (vitamin B₂) of the B/C modification in granule form. Furthermore, the invention relates to pure riboflavin in granule form which has a bulk density to be determined in accordance with DIN 53468 of from 0.45 to 0.7 g/ml and, after tableting, has a dissolution of at least 80%.
